

Desiccant feature

ARIDA

It is particularly important for certain types of medication to be kept extremely dry. In these cases, "ARIDA" – which is Latin for "dry" – is the perfect choice.

Benefits at a glance:

- Active moisture protection
- High absorption capacity
- Protection against cross-permeation
- Longer shelf-life for hygroscopic products

The solution for active moisture protection.

What is ARIDA?

Over time, we have seen pharmaceutical products in particular become increasingly sensitive to moisture. That is why moisture barriers are such an important issue in the packaging industry. ARIDA is a highly reliable product for moisture management in coldform packaging.

Why use ARIDA?

Thanks to its active moisture protection, ARIDA helps extend the shelf life of a product. It offers advanced barriers to prevent cross-permeation of moisture and a high absorption capacity with a unique design that absorbs humidity but not oxygen. When used in coldform blisters with various PE-based liddings, ARIDA is reliably compatible with existing systems and completely PVC-free.

Maximum protection, maximum support.

Where to use it?

This packaging solution is suitable for:

- unit-dose packaging, and
- customized packaging concepts.

What should first-time users know?

Constantia Flexibles offers personalized service for first-time users of ARIDA, ensuring close collaboration with clients until production is running smoothly and as designed. Our product development and application team works closely with clients to optimize the solution in terms of product value as well as economic value. This includes building a joint team of experts to ensure that the final product meets all of your specifications for technical performance and economic efficiency.

And the specifications?

For coldform blister

For sachets, strip packs, or stick packs

Stick packs are fully compatible for ARIDA protection.

ARIDA protection from the inside and outside of a shaped coldform blister.
